

No other boat can offer the fly fisherman this versatility....

Fish up or down the river and row or power-up and run back to the take-out

With the unique design and tunnel hull this Power Drifter combined with a outboard jet can run in as little as 4½" of water.

Additionally the design of the boat makes it extremely stable when using both casting decks in either running or still water. The low sides make it very easy for getting in or out of the boat for an enjoyable day of fishing.

CALL or E-Mail today to receive more information and pricing, so you too can fish more water with greater success
